

# STORAGE SERVICES

## The ideal storage system for your spare motors

American MTS understands what's important in an effective asset management program. We provide an array of products, services and training to help you put in place a world class program.

An important part of this and one of the most overlooked is motor storage. We have designed a system that incorporates the recommendations of motor manufacturers and EASA.

Motors are tested and cataloged in an online asset tracking system with portal access 24 hours per day.

Contact us today for your custom motor storage quotation.

- **Climate controlled**
- **Vibration free**
- **Shafts rotated monthly**
- **Winding insulation tests monthly**
- **Rodent free**
- **24/7/365 Delivery Available**
- **Free delivery 7AM to 5PM**
- **All motors run tested before storing**

Having a spare motor is a great way to ensure minimal production delays when a failure occurs. But are your spares ready to install and run? Many times spare motors are out of sight and out of mind. Once installed the spare motor only runs a short time and fails. Sound familiar?

The most important considerations for motor storage according to the motor manufacturers and EASA are a clean, dry and rodent free area with minimal vibration (<.015 in/sec), controlled humidity (< 60% or winding heaters used), shafts rotated monthly and periodic insulation tests.

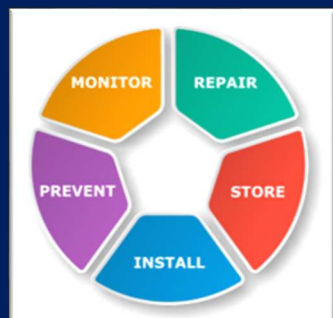

With American MTS storage programs you get the assurance that your spares are being maintained regularly so you can focus on more important things.
