

Want to sleep easy?

A reliability centered maintenance program combines the elements of preventative, condition based and predictive techniques. For many years, preventative programs consisted of a few squirts of grease periodically added to bearings. Today's technology allows for more precise measurement of when lubrication is needed as well as how much.

In addition, it's important to keep the motor clean to ensure proper air flow and heat transfer as originally designed. This can be as simple as a quick wipe down or for DC machines, large exposed rotors, blowers, transformers, etc. dry ice blasting may be a better option.

American MTS is constantly looking forward to new technologies and using existing technologies to provide the most efficient and cost effective methods to extend motor life for our customers to help them rest easy knowing we are here to help.

Monroe Repair Center
1825 N. Rocky River Rd., Monroe, NC 28110
(704) 289-4177

Shelby Repair Center
1143 Airport Rd., Shelby, NC 28150
